Lab 2: Working with Amazon S3

Scenario: Project Starlight
In this lab, you will be taking on the role of a data manager and cloud specialist for "Project Starlight", a university astronomy club. Your mission is to build a secure, cost-effective, and scalable storage solution for the club's growing collection of telescope images and research data using Amazon S3.

This module will guide you from basic, visual interactions in the AWS Console to powerful command-line automation, working with AWS S3's features, and finally the deployment of a public webpage.

Activities & Marks

Lab 1: The First Observation (Using the AWS Console)	5 marks
Lab 2: Automating Nightly Uploads (Using AWS CloudShell)	10 marks
Assignment 1: Organizing the Research Data	30 marks
Lab 3: Data Safety and Cost Management (Lifecycle & Versioning)	10 marks
Assignment 2: The Planetary Data Policy	30 marks
Lab 4: The Public Showcase (Static Website Hosting)	15 Marks
Total Marks for S3 Module: 100
