THOMPSON RIVERS UNIVERSITY | Science

CLASSROOM VISITATION
Traditional

Guidelines for Classroom Visits by

Colleagues, Chairs, Associate Deans and Deans

1. The observer arranges with the instructor to attend a class session appropriate for the observation of the Instructor's skills as a University teacher. Normally the class session will be 50 minutes in length.

2. The observer should plan to be in attendance before the class begins and remain until the class is over. For classes of two hours or more, the observer should arrange with the instructor to wrap up the first part of the class and take a short break after the first 50 minutes of class so the observer may leave.

3. It is recommended, but not mandatory for the observer and instructor to meet prior to the class. This meeting may be used by the instructor to explain his/her objectives for the class session to be observed. If the instructor plans to take an approach in the class that is experimental or unconventional the prior meeting provides an opportunity for the instructor to explain what s/he is attempting to achieve in the class.

Nov 12, 2024

4. It is recommended the instructor provide the observer with copies of instructional or other relevant material to orient the observer to the class.

5. The observer may use the reverse side of this sheet or another sheet to take accurate notes on the instructor's demonstrated teaching abilities in the class session.

6. If the observer doesn't have an opportunity to review his/her observations with the instructor after the class ends, a timely meeting for this purpose should be scheduled.

7. Reminder: an important principle of effective classroom observation emphasizes the value of feedback not only on what you observe, but also on what the instructor might have done to improve the learning experience for students.

8. For observation in laboratories the observer should be in attendance for the laboratory introductory lecture (usually 10-15 minutes), and should remain for a further 10-15 minutes to observe the interaction of the lab demonstrator with the students.

CLASSROOM VISITATION
Traditional

Instructor: Dr. Sina Keshvadi
SENG 4620 - 2024-11-12

Evaluator: Dr. Shaista Jabeen

INTRODUCTORY ACTIVITIES	
Instructional Skill	**Comments**
How does the instructor meet the class?	In person, physically in the classroom.
Outline/Objectives/overview for session given? Tie in with previous session?	Yes, outline was provided and it showed ties to the previous session.
Instructor conscious of physical stings/problems?	Yes, instructor shared the lecture slides to the student's computer screens in the classroom.
PRESENTATION	
Does there appear to be a plan for the class? Instructor well prepared?	yes
Is the instructor organized and logical in the presentation?	Yes, the topics were organized
Are complex ideas explained clearly?	yes, there was an interactive discussion while explaining the ideas to students.
Are key concepts/important point emphasized?	Analogies/examples are used to describe a concept, that reinforced the concepts.
Speaking skills/eye contact/mannerisms.	Good
Variety of techniques/aids.	Yes
Use of blackboard/whiteboard/projector.	Projector
Use of questions or feedback techniques.	Yes, an interactive activity was assigned to students to get their opinion on a case study
Response to students' questions.	Good
Pace of presentation.	Well-paced
Use of examples.	Several examples were used
Confidents/enthusiasm of Instructor	Very good
Participation – students active or passive? Attentive?	Students actively participated. The subject is interesting so students were taking keen interest and participating because they could relate to daily use of Instagram, Facebook, YouTube.
Control of class/general atmosphere.	Good
Other comments.	-
Suggestions for development.	Probably instructor can take some printouts for discussion points or an overview of activities which are planned for the lecture.
WRAP UP	
Instructional skill	**Comments**
Instructor's expectations/student responsibilities clear?	Yes, instructor expectations and student's responsibilities were clear.
Session drawn together/summarized usefully?	Key points were mentioned after each topic.
Time for questions?	Students could ask questions any time during the lecture, and it is a good approach.
Transition to next session?	The lecture was concluded with the concepts of relational databases, the next session would start about non-relational databases.
