THOMPSON RIVERS UNIVERSITY | Science

CLASSROOM VISITATION
Traditional

Guidelines for Classroom Visits by

Colleagues, Chairs, Associate Deans and Deans

1. The observer arranges with the Instructor to attend a class session appropriate for the observation of the Instructor's skills as a University teacher. Normally the class session will be 50 minutes in length.

2. The observer should plan to be in attendance before the class begins and remain until the class is over. For classes of two hours or more, the observer should arrange with the instructor to wrap up the first part of the class and take a short break after the first 50 minutes of class so the observer may leave.

3. It is recommended, but not mandatory for the observer and instructor to meet prior to the class. This meeting may be used by the instructor to explain his/her objectives for the class session to be observed. If the instructor plans to take an approach in the class that is experimental or unconventional the prior meeting provides an opportunity for the instructor to explain what s/he is attempting to achieve in the class.

4. It is recommended the instructor provide the observer with copies of instructional or other relevant material to orient the observer to the class.

5. The observer may use the reverse side of this sheet or another sheet to take accurate notes on the instructor's demonstrated teaching abilities in the class session.

6. If the observer doesn't have an opportunity to review his/her observations with the instructor after the class ends, a timely meeting for this purpose should be scheduled.

7. Reminder: an important principle of effective classroom observation emphasizes the value of feedback not only on what you observe, but also on what the instructor might have done to improve the learning experience for students.

8. For observation in laboratories the observer should be in attendance for the laboratory introductory lecture (usually 10-15 minutes), and should remain for a further 10-15 minutes to observe the interaction of the lab demonstrator with the students.

THOMPSON RIVERS UNIVERSITY | Science

CLASSROOM VISITATION
Traditional

Instructor: Dr. Sina Keshvadi
SENG 4220 – April 08, 2026

Evaluator: Dr. Munima Jahan

INTRODUCTORY ACTIVITIES	
Instructional Skill	**Comments**
How does the instructor meet the class?	Dr. Sina greeted students warmly and engaged them in brief conversations, creating an inclusive and welcoming atmosphere.
Outline/Objectives/overview for session given? Tie in with previous session?	He began by briefly reviewing the previous lecture and highlighting its connection to the current topic.
Instructor conscious of physical stings/problems?	The session was well-managed, and the instructor demonstrated effective classroom management. They maintained continuous interaction with students and remained attentive to student engagement and responses throughout the lecture.
PRESENTATION	
Does there appear to be a plan for the class? Instructor well prepared?	Yes. The material was very well organized. There was a logical order between topics. Dr. Sina demonstrated strong knowledge and thorough preparedness throughout the session by presenting the content in a detailed, step-by-step manner.
Is the instructor organized and logical in the presentation?	The material was very well organized, and the session followed a clear and logical progression, focusing on Cross-Site Request Forgery (CSRF) and Cross-Site Scripting (XSS) attacks. The instructor first introduced these vulnerabilities within the context of web applications, addressing both client- and server-side perspectives without security measures in place. This approach provided a strong foundation for students to understand the nature of threats at each level. The session then progressed to security implementations, presented from two perspectives: the general principles of web security and specific browser-level defenses.
Are complex ideas explained clearly?	Yes, complex ideas were explained clearly and effectively. The instructor presented advanced topics such as Cross-Site Request Forgery (CSRF) and Cross-Site Scripting (XSS) in a structured and accessible manner by first establishing a strong conceptual foundation without security measures in place. This step-by-step approach enabled students to understand the underlying vulnerabilities before introducing more complex security solutions. By connecting theoretical concepts with practical perspectives, the instructor made challenging material easier to grasp and highly engaging for students.
Are key concepts/important point emphasized?	Yes. During the discussion, Dr. Sina highlighted key concepts that are particularly important and frequently applied, emphasizing the need for students to focus on and thoroughly understand them. He actively engaged students by posing questions throughout the session, effectively gauging their understanding and encouraging participation.
Speaking skills/eye contact/mannerisms.	His speaking skills were great, and she maintained constant eye contact with the students.
Variety of techniques/aids.	The instructor effectively used a variety of instructional techniques, including slide-based presentations supported by a projector, and a laser pointer to highlight and emphasize key concepts, helping to maintain student focus and enhance clarity.
Use of blackboard/whiteboard/projector.	The instructor used projector to present the lecture.
Use of questions or feedback techniques.	He used short, targeted questions to engage students, check their understanding, and maintain their attention throughout the lecture.
Response to students' questions.	Questions were addressed thoroughly with sufficient time, and the well-paced lecture enabled clear explanations, resulting in strong student understanding and minimal confusion.
Pace of presentation.	Dr. Sina maintained a steady, well-paced delivery that supported audience engagement and ensured clear communication, allowing participants to follow and comprehend the content effectively.
Use of examples.	Dr. Sina used appropriate and relevant examples for each topic, illustrating potential vulnerabilities in web applications across multiple platforms, including Google and Amazon.
Confidents/enthusiasm of Instructor	Dr. Sina demonstrated strong confidence in the subject matter and a clear enthusiasm for teaching. This was evident throughout the session and contributed to an engaging and dynamic learning environment that positively supported student engagement.
Participation – students active or passive? Attentive?	Students occasionally posed questions, demonstrating active participation and attentiveness during the session.
Control of class/general atmosphere.	The learning environment was calm and engaging, with students demonstrating interest in the material throughout the session.
Other comments.	Dr. Sina was well prepared and demonstrated a strong command of the subject matter, effectively communicating complex concepts with clarity and maintaining student engagement throughout the lecture.

Suggestions for development.	N/A
WRAP UP	
Instructional skill	**Comments**
Instructor's expectations/student responsibilities clear?	Yes. Both the instructor's expectations and student responsibilities were communicated clearly, resulting in no observable confusion among students.
Session drawn together/summarized usefully?	He regularly provided concise summaries after discussing each topic, reinforcing key points and supporting student understanding throughout the lecture.
Time for questions?	Students were encouraged to ask questions and actively engage in the learning process.
Transition to next session?	Key points of the session were summarized at the end of the lecture period and tied to the next topic.
