Part A. Senate Questions

Administered to all courses.
0 = Strongly Disagree, 1 = Disagree, 2 = Agree, 3 = Strongly Agree

Questions	Count	Average
A1. The course was a valuable learning experience for me.	19	2.9
A2. The course challenged me to do my best work.	19	2.9
A3. I think the course content reflected the learning outcomes, as stated in the course outline.	19	3.0
A4. The course experience increased my appreciation for the subject matter.	19	2.9

Survey Response Summary 19

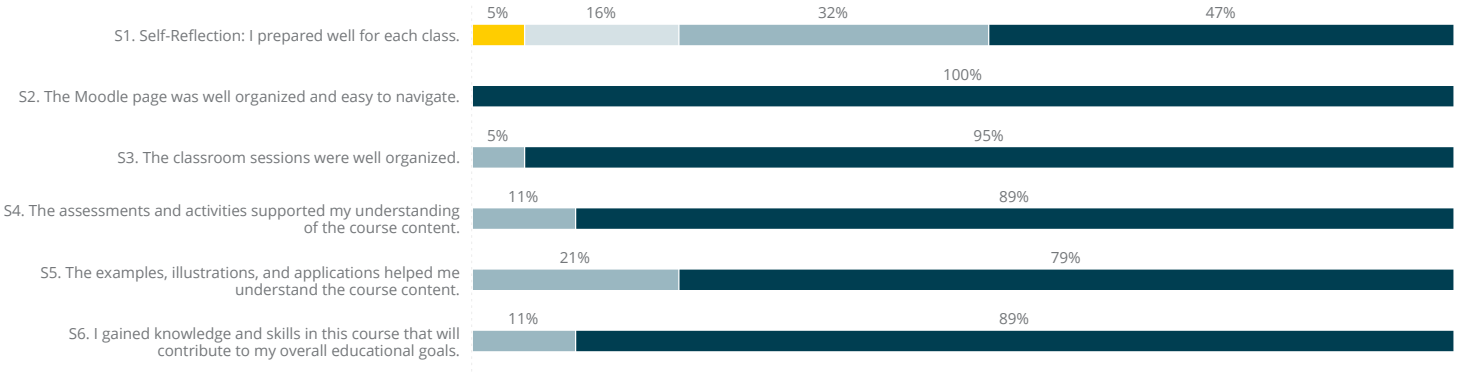

Part B. Ratings of Teaching

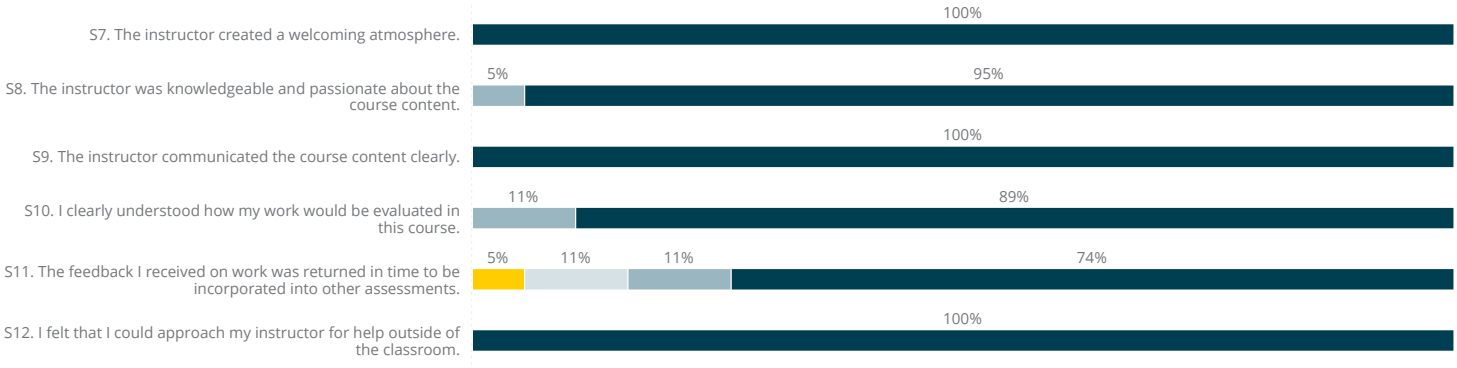

Administered to all Faculty of Science courses.
0 = Strongly Disagree, 1 = Disagree, 2 = Neither Agree nor Disagree, 3 = Agree, 4 = Strongly Agree

Questions ↑	Count	Average
S1. Self-Reflection: I prepared well for each class.	19	3.2
S2. The Moodle page was well organized and easy to navigate.	19	4.0
S3. The classroom sessions were well organized.	19	3.9
S4. The assessments and activities supported my understanding of the course content.	19	3.9
S5. The examples, illustrations, and applications helped me understand the course content.	19	3.8
S6. I gained knowledge and skills in this course that will contribute to my overall educational goals.	19	3.9

Questions	Count	Average
S7. The instructor created a welcoming atmosphere.	19	4.0
S8. The instructor was knowledgeable and passionate about the course content.	19	3.9
S9. The instructor communicated the course content clearly.	19	4.0
S10. I clearly understood how my work would be evaluated in this course.	19	3.9
S11. The feedback I received on work was returned in time to be incorporated into other assessments.	19	3.5
S12. I felt that I could approach my instructor for help outside of the classroom.	19	4.0

Survey Response Summary

Part C. Comments

Administered to all Faculty of Science courses.

S13. What aspects of this course worked well? 19

Responses
All labs are in the newest content, which is good.
The self-paced nature of the labs is very supportive/works well with our heavy final year course load
The challenges were a fun and interactive way to learn security concepts and were a nice change from some of our other labs in the program.
Can learn full-stack development.
'- pwn was fun
Having the labs and the lecture notes be near each other. The lab was an application of the lectures, so having it organized in such a manner was helpful.
This was one of those most interesting courses I have taken in my degree and the professor showed genuine care for our learning and understanding. The professor did an excellent job of delivering a very large amount of content in a single semester.
N/A
The lecture content was organized and easy to follow in class. Technical concepts were broken down and explained simply.
The knowledge I learned in this course is close to the real-world updates and scenarios, which are very good.
PWN.college was such a great learning website with all the challenges. I'm glad we got to do it for this lab.
The content was well organized and very interesting. I didn't know much about security but I was pleasantly surprized by the content. I was always excited about this class and even the exams as well. Lectures are really detailed and insightful.
The particular delivery of these labs was unlike any labs I have taken before in a good way. The online platform used provided plenty of instructional material and helped me understand the course content better.
The good thing is that all the material relates to outcomes, and all topics are useful for understanding network security. And the examples in class are easy to understand.
The overall structure was good
N/A
The labs were extremely helpful in applying the theory learned in the course. The list of resources available at the bottom of the moodle page was helpful.
labs are organized well and are very educational. Instructions are clear enough to guide me through the lab and I rarely got lost even when things became more difficult.
N/A

S14. What aspects of this course could be improved upon? 19

Responses
There are too many lab questions in some topics, especially for the last year students. Sometimes we do not have enough time to finish all the questions in a week.
Some hands on examples in lecture may help with understanding lab tasks
Some of the labs felt a bit too long and difficult to complete.
The good part of the course is we can learn full stack development but it made the content of the course too much that students feel difficult to catch up. It would be best if th classes are separate for frontend and backend, but I am not sure it is the best way. Maybe backend can start earlier than the frontend bcause frontend's complexity can be reduced by design, but backend won't. and for the project, I believe it is easier to start from backend.
'- some specific challenges contains multiple challenge inside of them. it makes difficult for students to find the time to do it. maybe more frequent update is required?
n/a . I like how the labs are organized.
The lecture slides were much too long and are difficult to study off of
'- Web note does not cover everything... which makes it difficult for me to find use of it. But I belive it have big potential for students to understand the materials better.
N/A
All good.
When we are doing most of the labs, we don't know anything about where to even start which makes it hard to finish the labs on time. It also forces us, I guess me personally, to rely more on AI than I would like to which I didn't do early on in the challenges because they were easier and more comprehensible. Professor doesn't give us needed help regarding the lab (Maybe because he thinks AI could help but sometimes AI just makes it worse, especially if you don't understand something core) and the instruction in the website are either too high level or some resources are too hard to understand and translate to code/script/command for the challenges.
N/A
Ensuring the lab templates are up to date. Sometimes it took a unnecessarily long time just to set up the report document.
All good
It felt like there was too much material for one course. While I understand the course has to teach full stack, the pace at which we moved from one tool/library to another did not give me a chance to comprehend the previous. This often led to a lot of unnecessary confusion and learning 3 syntaxes at the same time.
Lectures are just a bunch of code in slides and wee don't go too much into detail about react, functions, how components work. There are so many things to learn that the course material is stretched thin and we are running to finish slides (reading code) and that personally shouldn't bee how we learn coding heavy courses.
The course is fast-paced, because there's alot of content to cover, and the only way to learn was to practice the content yourself. Maybe slightly seperate the code in a different slide set, and the related theory in a different lecture set.
since the lecture doesn't give us solid foundation in terms of basic webapps programming, it is sometimes hard to get started on the lab.

It was a great course! Thank you!
N/A
Thank-you. Though the course was extremely content heavy, but it was interesting, and the professor made an effort to relate real-world knowledge, experience, even future learning skills for the student to improve their experience in the real-world after graduating.
N/A
It was interesting and fun! thank you.
N/A
That is very good to have knowledge related to the current workflow.
Some labs have lots of challenges and even the professor knows that we will not finish it so if the professor knows we won't finish it then they should eb reduced or we should get more help.
When talking about certain attacks, having a demo of those attacks to immediately see after we are finished with theory would make the lectures even more fun that they are now.
N/A
No
It is obvious the instructor is passionate about the subject and cares deeply about his students learning both in the classroom and beyond as we prepare to graduate. I feel genuinely fortunate to have had such a great prof in my undergrad.
enjoyable course. I liked it.
N/A
Enjoyable lab.
